

VECOM®

A reliable, flexible and open solution

Peek Traffic breaks-up the traditional proprietary approach in the public transport sector. VECOM® and VETAG® systems are now compatible with HCS-V and HCS-R equipment of Hanning & Kahl. The realization of the first project starts in Q1 2021 in the capitol of Finland (Helsinki). This offers tremendous opportunities for VECOM® and VETAG® distributors. We welcome you to discuss this latest innovation and jointly scout for opportunities.

Generally speaking, manufacturers of public transport systems actively make their solutions incompatible. Creating a supplier lock-in. As a result, it is hard for customers to introduce and integrate competitive solutions, with better characteristics, in an existing system.

That is why, VETAG® and VECOM® systems are designed to be interoperable. Both for detection and for other functions, in combination to systems from various brands of traffic controller systems, point controller systems, etc. all over the world. This flexibility and openness are unique characteristics of the VECOM® system and will give you more sales opportunities.

Compatibility with Hanning & Kahl

Recently we made our VECOM® compatible with the HCS-V and HCS-R equipment of Hanning & Kahl for both VETAG® and VECOM® communication. VETAG® is a unidirectional information system, whereas VECOM® is a bidirectional information system. In the table all possible combinations between our
